

IPGRI—The International Plant Genetic Resources Institute (IPGRI) is an autonomous international scientific organization, supported by the Consultative Group on International Agricultural Research (CGIAR). IPGRI's mandate is to advance the conservation and use of genetic diversity for the well-being of present and future generations. IPGRI has its headquarters in Rome, Italy, and offices in another 22 countries worldwide. It operates through three programmes: (1) the Plant Genetic Resources Programme; (2) the CGIAR Genetic Resources Support Programme; and (3) the International Network for the Improvement of Banana and Plantain (INIBAP).

IGD—The Institute for Genomic Diversity is located at Cornell University in Ithaca, New York, USA. IGD's mission is to develop, transfer, and provide technologies and educational resources to solve problems affecting the conservation of biodiversity and global food security. Specifically, our goals are: to utilize evolutionary and comparative genomics to solve applied problems; to develop and transfer enabling technologies in genomics and bioinformatics; to provide continuing support for national and international efforts in conservation, agriculture, and crop improvement; and to educate and train at all levels (including but not limited to undergraduate and graduate students, visiting scientists, faculty, teachers).
